

# ***SPEED EVIL***

Swedish champion 2004 – Roland Ström  
Nordic champion 2005 – Viktor Wilck  
French champion 2006 – Philippe Vialla

**SpeedEvil2007** is Team Laje's latest racing car for 12th scale on road. Developed in conjunction with the best drivers in Sweden and France. Countless hours of design, analysis, and testing is behind this extreme competition pan car. Only the best materials are used in the SpeedEvil2007. For example; Aluminum 7075 T6, quasi isotropic carbon fiber, ceramic ball bearings and titanium turnbuckles. SpeedEvil 2007 is delivered pre-assembled. The team is working hard to always improve the products and find the best solutions to make you a winner on the race track.

**SpeedEvil** has since it's debut 2004 won Swedish, Nordic and the French championships. Now even better. Take a closer look on the SpeedEvil2007 and become a winner with Team Laje.

Team Laje's MH front end is the most adjustable on the market.

### MH Front end

With the MH front end you can easily adjust following important parameters to achieve your goal on the race track; camber, caster reactive caster, camber gain, toe in/out, roll center, ride height, springs and dampening.

### Super oil shock

Team Laje's oil shock is designed like a real touring damper which gives a higher durability and smoother action.

### Simple T-bar adjustment

The t-bar is mounted on the chassis with team Laje's unique adjustable NTS t-bar bracket and a Teflon coated aluminum ball. With the NTS bracket you can easily adjust the t-bar stiffness by turning the NTS bracket.

### Rear axle with precision spur gear

Team Laje's rear axle is made of high top quality graphite and the wheel hubs are made of aircraft grade aluminum. SpeedEvil2007 is delivered with a PRS machined spur gear for highest accuracy and lowest friction. Eight pairs of height adjusters with 0.5mm difference between each height are included. The differentials also includes the all new light weight diff rings.

### Ceramic ball bearings

Since SpeedEvil2007 is a high level competition car, it is delivered with a total of 9 high quality ball bearings with ceramic balls. Even the differential is equipped with ceramic balls.

### Side dampeners with springs

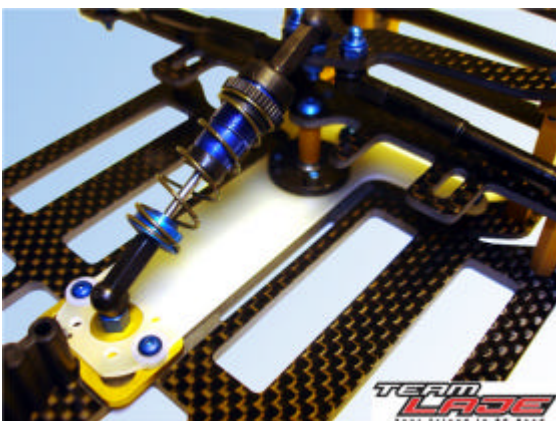

SpeedEvil2007 is equipped with side dampeners in tough nylon for lower weight and smoother action. Each side dampener has the possibility to add different springs to further adjust the car.

### Rigid rear end

The rear end is designed to withstand the high torque of today's high end motors. Motor plate and side plate are made of aircraft grade aluminum and mounted with a total of 8 screws in the lower and upper brace.

### Well chosen material

All aluminum parts are gold anodized and the screws are made of blue anodized aluminum to emphasize the cars Swedish origin. Front wheel axles and turn buckles are made from titan.

Team Laje's super oil shock and NTS T-bar bracket.
